Frameline Generator

The Transvideo Frameline Generator can display one, two or three frame-lines, a center cross and a marker. The controls are simple to use and the parameters can be customized to suit any preference. Once setup is complete, the display can be saved to memory for future use. This frameline generator is ideal for HD image outputs or film cameras with faded ground glass.

Format Converter

The Transvideo Format Converter can convert a NTSC or PAL image into three different formats, 4:3 (1.33), 16:9 (1.77) and anamorphic (2.4), without cropping. Additionally it can flip an image left to right and the frame can be adjusted up, down, left and right through simple arrowed buttons.
