

Wildcat Dolly

The Wildcat is not just another "desert dolly", but a carefully engineered wide profile tired tracking and load carrying dolly that can tackle multi roles on set. It is light enough to lift onto a roof rack, but tough enough to lug over a ton of load. Fitted with precision wheel hubs and optimum steering geometry, it can handle demanding tracking moves where tracks are not feasible. This dolly can be used in low mode or flipped over if more ground clearance is needed. Standard Giraffe Crane track wheels can be fitted, transforming this dolly into a light but stable platform for those critical tracking moves. The Wildcat is constructed using corrosion proof materials and finished in a tough epoxy powder coating thus making this dolly a low maintenance, extremely durable and versatile piece of equipment.

Wildcat Dolly

Wildcat Dolly Quick Specs

Overall Length, Width, Height	Platform Height	Load Capacity	Weight
67.2" x 50.4" x 40.8" (1.7m x 1.3m x 1.0m)	Low Mode 8.5" (0.2m) High Mode 13" (0.33m)	2200lbs 1000kg	132 lbs 60 kg
