

# Sled Head

The Sled Head delivers a frame accurate motion control dolly system. It can be used with a pan/tilt Worrall head (as seen in the photo) or integrated with other Flair driven motion control remote heads. It provides programmable axes for track, pan, tilt, camera, zoom, focus, iris and still control more axes for model movers. Design your shot with the Flair software, operate with live controls or import your pre-designed or tracked CGI move from any standard platform (Maya, Softimage, 3D Studio, Inferno tracker, etc). The Sled Head is driven on the extremely stable Milo track and comes with a series of risers for varying camera heights.
