

Carbon Head

The Carbon Head is a light-weight, sturdy, digital two axis, wireless remote head. It features a digital closed-loop servo system with electronic gearing and a simple touch screen display. The slip rings assembly delivers power, data, two video channels and signal connections to the camera. The wireless function has a range of 1500' (450m) indoors and 7 miles (11km) outdoors (line of sight) via a 900MHz digital spread-spectrum radio system without the need for external receivers or driver boxes.
