

LIBRA

REMOTE HEADS

WHITES SPECIALTY EQUIPMENT

The Libra entered the remote head market in 2000, since then it has been recognized with an Academy Award and become a standard for film and television production. The Libra has gone through many upgrades over the years and is now on version 5. The Libra features a fully digital system with frame accurate repeatability, shutter sync, auto horizon and vertical reference. The Libra is extremely versatile due to it's lightweight and ease in operating underslung, overslung or in Matrix mode (horizontally mounted).
